

HOME / PROJECTS / 5 V / 1 A SMPS

PERSONAL / PUBLIC TECHNICAL PROTOTYPE

5V/1A *SMPS.*

An offline flyback prototype documented from transformer winding and component selection through waveform capture and bench validation.

FLYBACK TNY285 MAGNETICS WAVEFORMS VALIDATION

01 / OBJECTIVE

Turn a power stage *into evidence.*

The project follows an offline flyback prototype through transformer and component decisions, schematics or BOM material, waveform capture and bench validation notes.

This is a personal public prototype. It is not presented as a certified supply, production design, commercial deployment or guaranteed output result.

Magnetics, *switching, tests.*

Technical scope

The repository provides a traceable record of transformer work, component selection, schematic/BOM material, captured switching waveforms and bench observations.

TOPOLOGY

Offline flyback prototype.

VALIDATION

Bench measurements and waveform review.

Switching-drain waveform photograph from the public repository; source file Drain.JPEG.

Gapped transformer and Kapton insulation construction; source file
Kapton_tape_gapped_transformer.JPEG.

Transformer pin and termination orientation; source file
Transformer_Pin.JPEG.

Primary-winding inductance measurement setup/readout; source file
Primary_Inductance.JPEG.

Leakage-inductance measurement setup/readout; source file
Leakage_Inductance.JPEG.

72-turn winding resistance measurement setup/readout; source file
72Turn_Resistance.JPEG.

03 / EVIDENCE

Measured under *stated conditions.*

This gallery is curated from existing project photographs supplied with the public SMPS repository. Captions identify the documented subject and source file; no values or validation claims are inferred beyond what the photographs show.

○ START A TECHNICAL DISCUSSION

Bring the *prototype.*

Describe the converter, current stage, measured behavior and the design decision you need to make.
Secure file exchange can follow the initial discussion.
